EVOLUTION OF SURFACE ROUGHNESS DURING COLD ROLLING OF STAINLESS STEEL

REHAN AHMED & MICHAEL SUTCLIFFE

Heriot-Watt University Dept. Of Mech., & Chem., Eng. United Kingdom *Cambridge University* Department Of Engineering United Kingdom

<u>Industrial Collaborators</u> British Steel Avesta Sheffield

AIMS & OBJECTIVES

- Develop a model to extract surface features such as roll marks and pits on the sheet surface.
- Quantify surface feature changes through the roll bite for typical pass schedule.
 - Investigate the influence of surface features on functional requirements of sheet surface.
